

Sentraverse

BRAND IDENTITY SYSTEM

A connected visual and verbal standard / 2026

Brand at a glance

A public gateway. A connected story.

An unmistakable entry point to an interconnected healthcare intelligence ecosystem built around Indonesian clinical realities.

POSITION

Sentraverse explains the ecosystem and routes audiences to distinct Sentra products. It is not a clinical decision engine.

Meaning before mechanics

Clinical technology explained with clarity. Human decisions remain central.

PURPOSE

Make Sentra Healthcare AI understandable, trustworthy, and discoverable - without positioning the public gateway as the clinical decision engine.

POSITIONING

Sentraverse is the public brand and navigation gateway for Sentra Healthcare AI; it introduces connected products, research priorities, and the people behind the mission.

VISION

A connected healthcare future, grounded in the needs of Indonesia.

CREATOR

Developed within the Sentra Healthcare AI ecosystem by dr. Ferdi Iskandar (Drferdi).

One universe. Distinct products.

The Sentraverse identity makes the organization legible without dissolving the identities of its products.

A gateway, not a clinical engine

Keep marketing storytelling and product responsibilities separate.

| /dashboard

Routes to MedBoard. Existing upstream variable:
SENTRA_DASHBOARD_URL.

| /asisten-medis

Routes to Assistverse. Existing upstream variable:
SENTRA_ASSISTVERSE_URL.

| PROTECTED

Never overwrite or replace Next.js rewrite behavior in
next.config.mjs.

| SEPARATION

No imported clinical source code from sibling product capsules.

The neuron is the signature.

Branching possibilities. A central opening. Human intelligence meeting connected systems.

PRIMARY LOCKUP

NEURON / SYMBOL

One master. Purposeful versions.

01 / ORIGINAL MASTER
Source RGBA, exact pixels

02 / REVERSE
White artwork for dark backgrounds

03 / NEURON
Symbol-only for scalable product moments

Vector SVG is a contour-traced derivative, not a native editable master. Preserve source PNG for fidelity.

Clear space & optical rules

Proposed reproduction rules protect the small neural terminals and custom wordmark.

PROTECT THE SILHOUETTE

Do not redraw, warp, rotate, outline, or recolor individual branches.

CLEAR SPACE

Minimum 0.5x central-aperture diameter on every edge; use 1x for busy layouts.

MINIMUM SIZE

Full lockup: 180 px digital or 35 mm print. Icon: 32 px only after optical check.

MASTER FIRST

Original transparent PNG is the primary pixel-accurate file; traced SVG is approximation.

Avoid these brand failures.

01

LOW CONTRAST

Dark mark over dark background.

02

DISTORTION

Stretching, slanting or skewing the neuron.

03

TYPOGRAPHIC REBUILD

Typing the custom wordmark in a generic font.

04

ARTIFICIAL DETAIL

Extra branches, gradients, glow or clinical symbols.

The palette: technical calm.

Brand defaults are monochrome. Signal is a deliberate accent, not a second master color.

VOID
#0B0D10

GRAPHITE
#151515

PAPER
#F7F8F8

SIGNAL
#21BFAE

DEEP SIGNAL
#086F66

SLATE
#52616B

APPROVAL NOTE

Graphite is aligned with the supplied dark logo. Other colors are proposed extensions requiring owner approval.

Color must remain legible.

Aa Ink on Paper

CONTRAST: 17.16 : 1

REFERENCE PAIRING

Aa Paper on Void

CONTRAST: 18.29 : 1

REFERENCE PAIRING

Aa White on Deep Signal

CONTRAST: 6.04 : 1

REFERENCE PAIRING

Aa White on Bright Signal

CONTRAST: 2.3 : 1

CHECK FINAL TEXT SIZE

BRIGHT SIGNAL: USE DARK TEXT; WHITE ON SIGNAL IS NOT FOR SMALL COPY.

Typography is infrastructure.

INTER

Consistent. Clear. Uncomplicated.

DISPLAY / 64-88 px

Connected care

HEADING / 32-40 px

Built around clinicians

BODY / 16-18 px

Careful language creates trust and makes technology understandable.

LABEL / 12-14 px

SENTRA HEALTHCARE AI

Design with breathing room.

12-COLUMN GRID

1200 px max content width. 4 px spacing unit. Responsive gutter: 20 to 64 px.

Hierarchy: one idea, one primary action, one meaningful image in each major panel.

Human. Scientific. Grounded.

Illustration should signal clinical seriousness - never falsely imply a live clinical deployment.

PEOPLE FIRST

Authentic care settings and collaboration; appropriate consent and image rights.

ENGINEERED PRECISION

Industrial still-life, clean macro detail, tactile materials, subtle shadows.

GRAPHIC GRAMMAR

Branching curves, terminal nodes, apertures, intentional geometric whitespace.

AVOID THE CLICHES

No cartoon robot doctors, fake patient charts, neon AI brains or unsupported outcomes.

Sound credible. Stay human.

Bilingual communication can be confident and clear without exaggerated AI claims.

Confident, not absolute

Write specific capabilities and verified outcomes; avoid claims of guaranteed accuracy or patient benefit.

Human, not robotic

Lead with clinician and patient needs; use technology as the enabling subject.

Precise, not dense

Replace inflated AI terminology with short explanations and concrete examples.

Local, not insular

Use Indonesian healthcare context authentically while remaining accessible to international audiences.

Messages ready to refine.

BAHASA INDONESIA

Satu visi, layanan kesehatan yang lebih terhubung.

Jelajahi ekosistem Sentra Healthcare AI yang dibangun dengan memahami kebutuhan layanan kesehatan Indonesia.

ENGLISH

One connected vision for healthcare.

Explore a connected healthcare AI ecosystem grounded in Indonesian care workflows.

Built to work everywhere.

WEB HERO

Contrast and purpose before animation.

DECKS

Institutional consistency and evidence-first claims.

STATIONERY

Clear attribution, generous whitespace.

SOCIAL

Distinct mark, short message, readable on mobile.

Trust is an operating standard

Healthcare marketing must differentiate vision, product capability, research, and independently validated outcomes.

PRODUCT TRUTH

Describe capabilities only after checking current product state with owners.

CLINICAL CLAIMS

No invented accuracy, safety, efficacy, endorsements, regulation or outcomes.

PRIVACY

Use only authorized patient data and consented images, if any, in demo content.

ACCESSIBILITY

Confirm contrast, readable sizes, mobile tap targets, focus and reduced motion.

One system, controlled change

The identity is ready for creative review; formal release needs explicit brand-owner sign-off.

MASTER HIERARCHY

Supplied source PNG > future approved vector > PNG derivatives
> traced SVG approximation.

CHANGE CONTROL

Log palette, typography, messaging, name and master-mark
changes under version control.

RELEASE GATE

Owner approval; product wording reviewed; accessibility and
image rights validated.

ROUTING PROTECTION

Brand assets cannot overwrite /dashboard or /asisten-medis
routing.

SENTRVERSE

One connected vision.
