

CORPORATE DOCUMENT / V1.1

Document Style Specification

Visual and typographic rules for the Sentra Corporate Document System v1.1.

Sentra documents are information systems in print: structured, objective, aligned, and quiet.

v1.1

AUTHORITY

SSOT v1.1 / CANONICAL

SWISS / INTERNATIONAL TYPOGRAPHIC STYLE • GRID • TYPE • RHYTHM • CLARITY

**01 ROOT PRINCIPLE**

NON-NEGOTIABLE

Sentra corporate documents are an extension of the same Swiss / International Typographic foundation used across the wider Sentra visual language. A document is not a separate corporate sub-brand. It must feel like the same system translated into a reading, printing, and decision-making medium.

“Visual character comes from typography, proportion, rhythm, spacing, and contrast - not decorative effects.”

PRINCIPLE / VISUAL ROOT PRINCIPLE

- 01** Grid-based composition before free placement.
- 02** Asymmetric balance rather than centered corporate symmetry.
- 03** Hierarchy through type scale, weight, alignment, and whitespace.
- 04** Minimal ornament; rules and spacing are structural devices.
- 05** Restrained color; information remains legible in grayscale.
- 06** Consistency with established Sentra patterns takes precedence over novelty.

02 TYPOGRAPHY

THREE ROLES

ROLE	TYPEFACE	DEFAULT USE
Display / major heading	Archivo	Cover title, major section titles, primary hierarchy
Body / long-form	IBM Plex Sans	Paragraphs, explanatory text, table prose
Metadata / structured	IBM Plex Mono	Labels, IDs, page furniture, sequence numbers, numeric data

Archivo is reserved for display authority, not used as a body face. IBM Plex Sans carries reading load. IBM Plex Mono signals structured or machine-like information. The three roles should remain visually obvious; arbitrary mixing is prohibited.

03 PAGE GRID

A4 / ASYMMETRIC

ELEMENT	SPECIFICATION	INTENT
Page	A4 portrait	Primary corporate document format
Margins	18 mm left/right; 15 mm top; 14 mm bottom	Compact Swiss frame with sufficient print safety
Conceptual grid	12 columns	Composition guide; do not display grid
Primary zone	Approx. columns 1-7	Narrative, titles, main evidence
Context zone	Approx. columns 9-12	Metadata, status, side context
Structural gap	Approx. one column	Preserve asymmetry; avoid filling every available space

Word cannot enforce a responsive UI grid mechanically. The document therefore uses proportional table structures and fixed margins to preserve the same compositional logic: primary content, deliberate gap, context. Exact pixel UI geometry is not copied into print.

04 TYPE SCALE & RHYTHM

FUNCTION BEFORE STYLE

ROLE	SIZE / WEIGHT	SPACING LOGIC
Cover title	34 pt Archivo / 600-700	Large whitespace above/below; left aligned
Major section	21 pt Archivo / 600	Starts new thought; never stranded
Subsection / section label	11-12 pt Archivo / 600	Within-section hierarchy; pairs with mono sequence number when used
Lead	12.2 pt IBM Plex Sans / 400	Short executive emphasis only
Body	10.2 pt IBM Plex Sans / 400	1.18 line spacing; short paragraphs
Metadata	7.0-8.6 pt IBM Plex Mono / 400-700	Uppercase labels; compact, tabular where numeric

05

COLOR & LINE VOCABULARY

RESTRAINED

ROLE	TREATMENT	RULE
Primary text	Near-black	Default identity and reading color
Secondary text	Neutral gray	Metadata and subordinate information
Structural accent	Vermilion, sparingly	Sequence/status emphasis; never floods the page
Risk / critical	Crimson + explicit label/glyph	Color never carries severity alone
Rules	Hairline neutral / strong black	Structure, not decoration
Surfaces	Off-white only when necessary	Use whitespace first; containers are last resort

Do not introduce a separate blue corporate-document palette, gradients, shadows, glows, rounded cards, full-bleed dark covers, decorative corner treatments, or ornamental brand watermarks. These create a second visual language and are therefore out of system.

06

COMPONENT GRAMMAR

INFORMATION STRUCTURES

COMPONENT	CONSTRUCTION	USE
Executive Summary	Section head + lead paragraph	First-pass decision context
Key Point	Label column + strong top rule	One material takeaway
Data Table	No vertical rules; strong header/bottom rules	Comparable structured evidence
Decision	Accent top rule + explicit DECISION label	Decision required or recorded
Risk / Issue	Critical rule + glyph + text label	Material risk/issue only
Quote / Principle	Large type between rules	Governing principle, not decoration
Recommendations	Mono sequence + action text	Ordered actions
Appendix	Same grid and furniture	Evidence/detail, never a new style

07

LOGO & PAGE FURNITURE

QUIET IDENTITY

Use only approved Sentra master assets. The logomark appears once in the header as a small identity anchor; it is not enlarged as cover art, repeated as a watermark, or used inside data components. The formal company name is typeset as document metadata, not reconstructed as an unapproved graphical lockup.

FOOTER FIELD	FORMAT
Document ID	IBM Plex Mono / left
Version	IBM Plex Mono
Page number	PAGE n
Confidentiality	Explicit text label / right

08

PROHIBITIONS

CONSISTENCY > NOVELTY

01

No centered “annual report” composition as the default.

02

No dark luxury cover treatment or hero-logo composition.

03

No rounded cards, soft shadows, glow, gradient, bevel, or glass effects.

04

No generic consulting-style colored boxes for every message.

05

No decorative icons where typography and labels are sufficient.

06

No color-only status communication.

07

No new document-only typeface, palette, spacing scale, or ornament without governance approval.

A

APPENDIX

REFERENCE / OPTIONAL

Appendices preserve the same grid, typography, table logic, and footer furniture as the main document. They may carry denser evidence, source notes, or technical detail, but they do not become a different visual system.

REF	ITEM	STATUS
A.01	Source inventory	Verified
A.02	Supporting data	Attach / reference
A.03	Approvals	Record as applicable
